

Description of Modification

10Band LLC (10Band) requests authorization from the Commission to modify its license for WJ2XXI so as to specify various horizontal orientations of the antenna at the Elburn site. This will enable 10Band to study propagation characteristics on the additional azimuths. 10Band plans to test transmission on azimuths such as 141.0°, 46.7°, and 296.0°. Only a single orientation would be in use at any given time. No new equipment will be used, and no emissions designators, authorized power, or other system operating parameters will change.
