Subject: Additional Information Request

---

Message:

1. All equipment that Aeronet will use for the trial will have the capability to communicate with the SAS. Aeronet expects a fully operational and approved SAS to be available in Puerto Rico in the next several weeks.
2. Because there is no SAS, PAL and GAA operations are not commercially authorized or available in 355-3650 MHz. Accordingly, because there are no users, there can be no harmful interference. If commercial operations commence during the trial and Aeronet has not converted its experimental operations to GAA or PAL under the control of the SAS, Aeronet will cease operating. Aeronet will not be operating on 3650-3700 MHz, where legacy licensed operations may be ongoing.
