Subject: Additional Information Request

---

Message:

In order to mitigate and avoid interference with incumbent users, Aeronet will provide the geographic coordinates and relevant technical parameters of its base stations and client devices, consistent with Part 96 rules, to a Spectrum Access System (SAS) and Environmental Sensing Capability (ESC) administrator. This will enable the SAS/ESC to inform Aeronet that it must cease transmissions in a given area when the ESC receives such instructions from incumbent users. Aeronet will promptly follow such instructions.
