Subject: Additional Information Request

---

Message:

Hello Nimesh,

Below is the response to your request.

1) The DAS analyses provided in the ODAR all state stationkeeping will not be utilized. If stationkeeping will be employed as indicated in your response, provide the tolerances (+/- altitude, inclination, etc.) as well as rerunning the appropriate DAS calculations and submitting the new results.

Necessary tolerances have been included, and DAS analyses have been updated within the ODAR document. The updated ODAR has been uploaded as an exhibit to our application.

In addition to this change, updated versions of our SpaceCap API database and "Additional Data for API" documents have been uploaded as exhibits. We have recently received updates from our launch integrator regarding our orbital parameters. We are still in the same orbital plane, but shifted 180 degrees in our orbit, so RAAN and LTAN have been shifted by ~180 degrees and 10:30 AM Ascending has been updated to 10:30 AM Descending.

Best,

Austin
