

EXHIBIT "A"

General Motors Research Corporation, the Corporate licensee for General Motors Corporation is requesting the renewal of experimental radio license KF2XHE for use at the GM Proving Ground Site in Milford, Michigan. The experimentation tests performed consists of transmitting in the mobile radio frequency bands using antennas installed on the vehicle. The power is fed to the antennas by mobile radio transmitters which are also installed on the vehicle. Vehicle performance is evaluated by exercising the electrical/electronic systems and simultaneously transmitting in mobile radio frequency bands. The vehicle performance is evaluated to determine if hardening of any electrical/electronic system is required. Testing is performed sequentially on all frequencies and totals approximately three hours/month per frequency.
