Subject: FCC File # 0124-EX-PL-2007

Message:

When Optimera initially filed the confidential exhibit on 3/12/07 we had thought our experiment should be private due to confidential ideas involved. We then resubmitted an exhibit on 3/13/07 which was the same exhibit filed on 3/12/07. After internal discussion of the goals of this experiment we thought it prudent that the general public have access to this idea if they so chose to research it.

We believe that this experiment can greatly increase the communication ability of the vessels in the Bering Sea and around the world and therefore want to share the progress and idea with the world. Our hope is that the mariner men, women, and organizations working in the different waters around the world may soon have the access to the high-bandwidth tele-medicine applications available on land.

In addition, the market potential can also be observed through the life of the experiment. Ideally other companies will have the means to get involved in this concept and begin thinking outside the box to develop a new generation of maritime communications.
