

Austin Info Systems (AIS) is the prime developer of the All Source Analysis System – Light (ASAS-L) under direction from the U.S. Army, Product Manager Intelligence and Effects (PM IE). Under management of the Product Manager (PM) Prophet, the ASAS-L and the Prophet Spiral 0 System (formally known as Prophet Block I) has been successfully integrated as a system and has been issued to Military Intelligence (MI) units throughout the world. The system is now in the Post Production phase of its life cycle and management and configuration control of the operational software is the responsibility of the U.S. Army Communications Electronics Command (CECOM) Software Engineering Center (SEC).

CECOM SEC has the responsibility to provide software engineering and software technical support services for the remainder of the system life cycle. CECOM SEC has tasked L-3 Communications ILEX Systems under Contract DAAB07-02-D-P001 to provide support to their mission, which includes all post production software engineering support and all technology insertion activities for the system. This SOW specifically addresses a task to manage and provide technical and subject matter expertise for the Technical Insertion (TI) effort for the Prophet Spiral I program. This task assigned to ILEX requires the active participation and subject matter expertise of the ASAS-L prime developer, Austin Info Systems (AIS).
