

Purpose of the GPS Repeater

FRN: 0028551521

Location: 13900 Lincoln Park Drive, Herndon, VA 20171.

Raytheon design, develop & manufacture small tactical Tagging, Tracking & Locating, (TTL) devices for use by several US Agencies and the Military. The devices contain a GPS receiver to determine its location, and we are required to perform complete operational test of the equipment before any device is delivered to an agency or customer. The building that we reside in blocks all GPS signals, so as an aid to performing these tests, we require a GPS repeater system to be install inside the building.
