

Exhibit 1: Use of Frequency for Government Project

Basic facts:

The customer for our first launch is the Naval Research Lab (NRL).

The contract number will be finalized in approximately 1 month.

For proof of contract, contact Tim Duffy at the NRL at 202-404-3041.

Summary:

Space Exploration Technologies (SpaceX) is a small launch vehicle company, which will be launching an NRL satellite in January 2004. The first stage of the vehicle will separate and land in the Pacific Ocean at coordinates listed on our application. We need to place a recovery beacon on the first stage, which transmits a simple pulse for no more than three hours, so that our recovery ship may locate and recover the stage.
