

Fee exemption

The University of Utah Seismograph Stations (UUSS) is part of the University of Utah (College of Science, Department of Geology and Geophysics). We are funded, in part, to detect and analyze earthquakes and other ground motion within the Utah region and the Yellowstone Volcano Observatory. Data products are produced for local, state and federal government use and for the general public.

As such, we are publicly funded and provide a public service. As such, we've been fee-exempt for many services, etc.
