

Explanation of Experiment

Background:

V2X is a DOW contractor that integrates radar systems into a variety of defense technologies. As a result, it needs to test a ground-based radar to make advances needed by V2X's customers. This application requests a renewal of existing license WP2XIW without modification for continued testing of a RADA RPS-62 (aCHR) radar.

Synopsis:

- RADA Radar RPS-62 (aCHR)
- Spectrum required: 3300-3500 MHz
- Time of use: limited to ten minute tests, with only intermittent spectrum use
- Peak Power Amplifier Output: 280 Watts
- Average Power Amplifier output: 56 Watts
- Frequency Tolerance: 0.00001 %
- Antenna Gain: 19.9 dBi
- ERP: 27.4 kW maximum
- Emission Designator: 10M0P0N
- Reference: Indianapolis (Marion), IN - NL 39-47-29; WL 86-03-34

Radar System Under Development:

The radar is used to detect objects on V2X property per the RADA radar design parameters. The radar is operated using the power and modulation settings required for safety, reduced interference, and effective operation. The radar will be used for detection within the V2X facility at 6125 E 21st street, Indianapolis, IN 46219.

Test Time:

During testing, the time required to transmit radar data is less than ten minutes. Transmitter use will be intermittent during that period. During the remainder of the testing, the RADA radar will not be transmitting. For the ongoing testing and development, the radar is expected to be in use only 120 minutes per day, and only intermittently across those minutes.

RF Safety Compliance:

V2X will use its established RF Safety Plan for ground vehicle demonstration testing to ensure that no personnel are subjected to RF power density levels exceeding the Maximum Permissible Exposure limits (MPE) set forth in 47 C.F.R. § 1.1310 and the guidelines in FCC OET Bulletin Number 65. The existing RF safety plan limits the time that the radar can be tested, it cordons off the test area at a distance of 35 feet from the transmitter, which is the only area where the signal strength could exceed the maximum exposure limit, and there are signs posted alerting other V2X personnel to the testing. The V2X plant is a secure facility and it is not accessible to the general public. All RF exposure levels will be below the limits set forth in the Commission's Rules, therefore the proposed operations are in compliance with 47 C.F.R. 1.1307(b) of the Commission's Rules.

Stop Buzzer Point of Contact:

The Stop Buzzer Point of Contact for the proposed operations is:

Elijah Harris
317.638.9840 (cell)

Conclusion:

This license is being filed to allow V2X's testing of the RADA radar. The testing is expected to be conducted from August 2026 through September 2027. For questions please contact Paul Thieme, Spectrum Manager, V2X, paul.thieme@gov2x.com or 317-306-3847.
