

## FCC 15C – Product Information

### EUT AND PRODUCT INFORMATION

Type of Equipment	Wireless Indoor Camera
Applicant Name	Panasonic Corporation of North America
Address	Two Riverfront Plaza, 9th Floor Newark, NJ 07102-5490
Contact	Ben Botros
Telephone	+1-(201) 348-7760
Email	ben.botros@us.panasonic.com
Brand Name	Panasonic
Model Number	KX-HNC810
Hardware Version	
Software Version	
FCC ID	ACJ96NKX-HNC810
IC ID	IC:216A-KXHNC810

## FCC 15C – Product Information

### About this document

This document specifies the information that is needed to select the correct testcases and test procedures for testing to FCC Part 15C. The form must be completed by the applicant and submitted to Nemko before testing is started.

### Preparation of Equipment for Testing

#### Note (a): Number of samples for testing

In general, the following samples are needed for FCC 15C testing:

##### RF Conducted Tests:

One sample with a 50 ohm antenna connector (preferably SMA Female). Only one antenna connector is normally needed even if the equipment has more than one antenna, however EUTs with Smart Antenna Systems must have antenna connectors on all antennas.

##### Radiated Tests:

One sample with integral antennas. This sample will be used to measure Radiated Emissions, Antenna Gain, Part 15B and Power-Line Conducted tests.

If it is not possible to mount antenna connector(s) on the EUT all tests will be performed radiated or with a test jig. In this case the applicant shall always supply a value for the antenna gain.

#### Note (b): Power supply

Means of connecting the equipment to an external power supply shall be supplied by the applicant together with the equipment to be tested.

Battery operated equipment shall be supplied with the necessary batteries and chargers. All tests on battery operated equipment will be performed with new or fully charged batteries.

#### Note (c): Test Modes

Most RF tests are performed with the EUT in force transmit mode. Software and necessary programming tools must be submitted to Nemko together with the test samples before start of testing.

All tests will normally be performed on 3 channels and with all supported modulation types.

Frequency hopping equipment will be tested both with hopping active and without hopping.

Equipment with digital modulations other than Frequency hopping should transmit with as high duty cycle as possible.
