1. The GUI is incomplete. This limits our ability to assess whether the device is designed in a way such that users or installers cannot easily configure or modify the device for unauthorized operation.

The device cannot be configured or modified by the user for unauthorized operation. See the Software Theory of Operation for details.

2. The device most likely supports Mesh function. Please confirm. If true, please describe the specific Mesh implementation and explain why the DFS performance measured with one single pair of master and client would not see noticeable degradation when operated in the Mesh mode.

The module submitted for approval under this filing does not support a Mesh function.
