**Tune Up Procedure
For The
Inteligain IBA-NEX RF Amplifier**

The IBA-NEX is a full duplex RF amplifier for use on the Nextel system with iDEN branded phones from Motorola, Inc., that operates in the 806-825 MHz frequency range for phone transmission and the 851-870 MHz frequency for the phone receive range. The unit incorporates technology under license from Motorola Inc., via the use of sections of patents # US5815804, US6049704, US4896124, US5060294, US6025753, US6281748, EP1035657, US6496708, and US543684, and other proprietary circuit designs.

There is no frequency determining components, so there is no tune up procedure.
