Re: Engineering Certification Concerning EchoStar-9 at 121° West Longitude

Dear Ms. Dortch:

This letter confirms that EchoStar Satellite Services L.L.C. ("EchoStar") is aware that Anuvu Licensing Holdings LLC ("Anuvu") will be filing an application with the Federal Communications Commission seeking modification (the "Modification Application") of its blanket earth stations aboard aircraft ("ESAA") authorization (Call Sign E080100) to operate Ku-band transmit/receive terminals pursuant to the ITU Radio Regulations Article 5.504A and Section 25.228 of the FCC's rules. In addition, Anuvu has informed EchoStar that the antenna terminals will remain compliant with off-axis EIRP density envelopes in Sections 25.218 and therefore coordination pursuant to section 25.220 is not required. This letter is submitted in support of the Modification Application's request for authority for the licensed Anuvu ESAA terminals to communicate with the EchoStar-9 satellite at 121°W.L.

Anuvu has informed EchoStar that the Anuvu ESAA transmit/receive terminals, the 0.62-meter TECOM Ku-Stream (SAA) and 0.63-meter QEST Q050000 (GSAA), are installed and operated in accordance with the Anuvu FCC authorization and are consistent with the Commission's rules, meeting the required power flux density limits on the earth as well as the ESAA off-axis EIRP density limits in accordance with section 25.218.

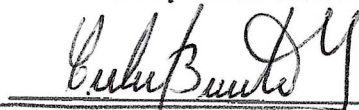

Respectfully submitted,

Jaime Londono
VP Advanced Programs and Spectrum Mgmt
EchoStar Satellite Services
