

Description of Corrections Necessary

Sinclair Portland Licensee, LLC (“Sinclair”) is hereby requesting a license correction in the renewal application. The existing license is internally inconsistent in categorizing the facility as “Fixed” but also providing the station location as “VARIOUS,” and that “temporary-fixed” is the correct designation. In addition, Sinclair requests that the geographic coordinates currently specified should be deleted as inconsistent with the correct categorization.

The original application (SES-LIC-20070207-00207) made clear that the applicant was seeking “authorization for a transportable Ku-band video uplink to be used for news and event coverage, primarily in the Portland, Oregon area and the Pacific Northwest.” That should have made it clear to FCC staff that this was a temporary-fixed unit, although the applicant (original licensee Fisher Broadcasting – Portland TV) identified it as a “Mobile Earth Station” and included the geographic coordinates.

Given that contradiction vs. the clear description provided, Sinclair is requesting a correction at this time.
