

## General Renewal Statement

In 2017 the International Bureau recommended that licensees seeking renewal of earth station licenses on FCC Form 312-R, include a brief narrative statement that specifically confirms station site location using the WGS84 coordinate datum and verifies the presence of the station site location using a mapping application such as Google Earth. This earth station was constructed, licensed and has remained in place on the roof of the building in which HITN's studios are housed. HITN has now performed the recommended location analysis for the facilities of Earth Station E970175 as last recorded on Renewal SES-RWL-20070820-01111 as Latitude 40° 41' 55.0" N; Longitude 73° 58' 17.0" W and using the recommended WGS84 Datum, GPS and Google Earth, has confirmed the location of the earth station as latitude 40.70510 and Longitude 73.97156

Additionally, this renewal has been filed less than 30 days prior to license expiration, but before the actual license expiration date. HITN respectfully requests routine processing for this renewal application, but is prepared to submit a waiver request if one is deemed necessary by staff.
